WHY BETTER BRICKS MAKE BETTER SENSE

- Bricks produced to a regular size and accurate form save half the cement mortar!
- Skilled bricklayers can make straighter slimmer joints between the bricks.
- Why not use your hardest burnt bricks as facings? No surface plaster needed.

MAKE YOUR PRODUCT SPEAK YOUR NAME

Put your company's name
on every brick

**HOW TO
OPERATE
THE F TYPE
BRICK
PRESS**

1. With the press box lid closed swing the handle to the press to the filling position

2. Open lid and push clay from the table into the press until filled to top

3. Action of closing lid pushes excess clay back on to table

4. Raise handle to upright location ready to compress the press rollers will drop into place automatically

5. Lift locking catch to release for pressure stroke

6. By pushing handle down the brick maker exerts several tones pressure on the clay in the box

7. Swing handle upright again making sure that the locking catch engages fully

8. When handle moves clear box lid turn this clear of box

9. Push the handle down further to eject the brick

10. Take the brick away to restart the operation
