32 STO 15	Divider block for straight moulds 140mm long

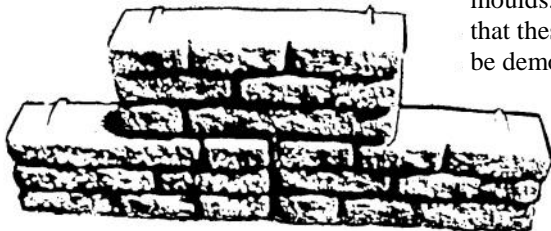

**BALUSTRADE** – These are produced from a synthetic rubber mould and can be used to provide decorative borders for gardens, patios and terraces. A variety of sizes are available and can be made on all vibrating tables or by using a Multivibe alone.

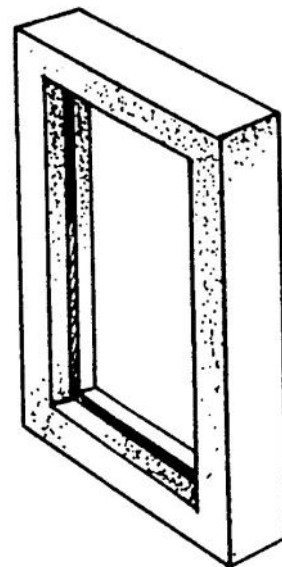

**COPING STONES** – Not only do these provide a finish, they will protect garden walls from water penetration. A vibrating table is required for production.

**DECORATIVE WALLING BLOCKS** – A stone effect wall can be produced using blocks made from these plastic moulds. A vibrating table is required for production. Please note that these moulds require overnight setting of concrete and cannot be demoulded immediately.

**WINDOW FRAMES** – Moulds for producing small concrete window frames to put in a block wall can be supplied. Each frame takes the place of three blocks and glass or transparent plastic can be fitted.
