

THE WET MIXING MACHINE

The Stabilite mixing machine is electrically powered and with the two wheeled chassis can be manoeuvred into position like a wheelbarrow.

The drum container rotates slowly bringing the mix into contact with the fast rotating impellers.

The edge of the mixing drum is brushed by the cleaning head.

Fast rotating mixing head

The static guide moves the mix away from the centre

After completion of the mixing cycle the active rotating mechanism is tilted clear of the mixing vessel giving full access to the operator to empty the contents.

CURRENT DEVELOPMENT STATUS:

Newly developed— under test

PROCESSING CAPACITY:

To be determined.
